

What the Film System & Unit Test Report

by What The Team

6/3/15

- A. User story 1 from Sprint 1 & Sprint 2: As a user, I want to be able to click on a movie cover so that I can watch a film.

Web Scenario:

1. Visit <http://www.whatthefilm.co>
2. Click on either one of the moving banners or one of the play buttons that appears on hover of one of the pieces of film artwork.
3. Click the Play button in the middle of the movie still. Movie starts.

iPhone Scenario:

1. Launch the app from iOS homescreen.
2. Tap on a movie cover to be taken to film screen.
3. Tap on play button on top of film still. Movie starts.

- B. User story 1 from Sprint 1 & Sprint 2: As a user, I want to be able to use a grid of movie covers so that I can find the film I want.

Web Scenario:

1. Visit <http://www.whatthefilm.co>
2. Scroll past the moving banner along the top to see each movie in one of several horizontal linearly scrolling artwork lists.
3. To see movies that are not visible, click and drag on one of the pieces of artwork to the left and more films will appear.

iPhone Scenario:

1. Launch the app from iOS homescreen.
2. Scroll past the featured banner at the top to discover horizontally scrolling lists of movies stacked on each other to form a grid.
3. To see movies not visible, tap and drag a cover to the left to show additional films.

- C. User story 2 from Sprint 3: As a user, I want to be able to browse movies by category so that I can find the film that I want.

Web Scenario:

1. Visit <http://www.whatthefilm.co>
2. Scroll past the moving banner along the top to see each movie in one of several horizontal linearly scrolling artwork lists.
3. Notice that each category is a genre in alphabetical order for easy identification of films.

iPhone Scenario:

1. Launch the app from iOS homescreen.

2. Scroll down to see that each set of movies has a heading.
 3. The headings are genres so that each movie is categorized by genre and only the movies for that genre are contained within that list.
- D. User story 3 from Sprint 3: As a user, I want to be able to search through the catalog of films so that I can find the specific film I'm looking for.

Web Scenario:

1. Unfortunately we lost this code so this is not possible any longer. Previously there was a search bar in the navigation that had a drop down list of results with film artwork that you could click on to take you to the film page.

iPhone Scenario:

1. Launch the app from iOS homescreen.
 2. Drag and pull down the interface to reveal the search input field hidden above the main content.
 3. Type the name of the movie you want. Alternatively, type a word in the description or summary or misspell the words slightly.
 4. See the results populate from your query below.
 5. Tap on the film you want to be taken to its screen.
- E. User story 4 from Sprint 4: As a user, I want the films to be organized in a neat and aesthetically pleasing fashion so that I trust and like the website.

Web Scenario:

1. Visit <http://www.whatthefilm.co>
2. Take a look at the details put into making the site easy to understand and pretty. For instance, the horizontally scrolling movies have a fading effect applied to the left and right of the scroll box so that the movies don't just appear to come from nowhere. They also have a yellow glow applied so that black artwork doesn't get lost in the background.

iPhone Scenario:

1. Launch the app from iOS homescreen.
2. When scrolling, notice the content is blurred under the status bar giving context and making the app seem modern.
3. Notice the film previews that populate between the categories that auto play, enticing you to watch.
